

UltraClip Installation

1.

2. Tension Adjustment

1. Lever should be at a max angle of 45° to the top of the board when you start to feel resistance.
2. You should be able to close the lever by pushing with your thumb only. Any more force required can damage the UltraClip or your board.
3. With the hook in the desired position tighten with 1/8" allen key and 3/8" wrench. Turn wrench until nut touches hook and turn wrench 1/4 turn to 3/8 turn more. Do not over tighten as the hook is designed to slide in case of an overload.
